

The first International Standard for all organizations that have staff "on the road" and that intend to manage the occupational risks related to the road, actively participating in the safety of road traffic.

Possibility to negotiate with the Insurance companies discounts of up to 25% on the R.C. AUTO (insurance premiums of the vehicles); it also allows the Company to have the right, in an indisputable and continuous way over the years, to relief on the insurance premiums INAIL, depending on the number of employees: 28% discount up to 10 employees, 18% discount with a number of employees between 11 and 50 and so on to climb.

The Health and Safety in the workplace and in **road traffic** is one of the elements that most affects the Company's risk profile and is also a priority for its reputation. Legislative Decree 231/2001 in combination with Law 123/2007 provides for heavy penalties for organizations involved in serious accidents at work.

By these first remarks we can understand the considerable level of risk to which the Company, and consequently the Owners, is exposed in the event of a serious accident.

A Management System in compliance with **ISO 39001:2012** can be a strong protection against such risks.

If we consider the associated economic advantages (discounts on INAIL insurance premiums of up to 30%), which continue uninterrupted, we believe that its adoption is an initial investment that cannot be postponed.

The application for a reduction in INAIL insurance premiums can be submitted every year from January to the end of February with the OT24 model; to take advantage of this advantage in the following year.

To whom it is addressed:

The standard covers all organizations that operate in the road transport system, in the **public and private sectors**.

- Any organization that has employees who travel with company vehicles for work purposes.
- Companies operating public and private transport, with particular attention to bus rental for tourism purposes.
- Companies operating in the field of logistics, rental and warehousing.
- Ministries, Municipalities, Regions and Provinces (sectors: transport, roads, safety, mobility, urban planning, education).
- • Emergency and medical care.
